

Digital Literacy Portfolio Project

Course Code: CSE0001

Course Title: Digital Literacy

Student Name: K Kashyap

Registration Number: 25BAI10101

Branch: B.Tech CSE

University: VIT Bhopal University

Date: March 29, 2026

1 Introduction

A Student Digital Ambassador plays a vital role in promoting digital literacy among peers by encouraging responsible and effective use of technology. Digital literacy equips individuals with the skills to navigate the internet safely, communicate professionally, and use digital tools efficiently. The purpose of this project is to enhance students' understanding of digital platforms, online safety, and communication skills. This foundation prepares students to face the challenges of the digital age confidently and responsibly, fostering academic success and professional growth.

2 Task 1 – Digital Literacy Infographic

Creating the digital literacy infographic using Canva was an insightful experience. The infographic covered essential topics such as the definition of digital literacy, safe internet practices, maintaining a professional online presence, and proper email etiquette. Canva's user-friendly interface made it easy to design visually appealing content. However, organizing the information clearly and selecting appropriate visuals was challenging. Through this task, I learned how to present complex ideas simply and attractively, which is crucial for effective communication. It also deepened my understanding of key digital literacy concepts and the importance of sharing this knowledge with others.

3 Task 2 – Digital Portfolio

I created profiles on GitHub, LinkedIn, and Kaggle to build a comprehensive digital portfolio. GitHub serves as a platform to showcase coding projects and collaborate with other developers. LinkedIn helps build a professional network and explore internship opportunities. Kaggle is useful for practicing data science skills through competitions and datasets. Establishing these profiles allows me to develop my technical abilities and connect with the industry. In future, I plan to regularly update my portfolios to reflect my

learning progress and use them to apply for internships and projects that will enhance my skills further.

4 Task 3 – Platforms

Solving coding problems on HackerRank improved my problem-solving skills and coding efficiency. The platform provides challenges that help strengthen algorithmic thinking and programming concepts. Additionally, creating a Google Form quiz allowed me to apply my technical knowledge in designing interactive assessments. Both tools contribute significantly to academic and technical growth. HackerRank prepares me for competitive programming and job interviews, while Google Forms enables easy sharing and evaluation of knowledge. Using these platforms regularly will support my continuous learning and practical application of digital skills.

5 Task 4 – Email Etiquette

Professional communication is essential in academic and workplace environments. Writing two emails, one requesting an extension and another applying for an internship, taught me the importance of clarity, tone, and structure. I learned how to craft polite and concise messages that convey the purpose effectively while maintaining professionalism. Understanding proper email etiquette ensures respectful interactions and creates positive impressions. This skill is valuable for building relationships and managing responsibilities in digital communication.

6 Task 5 – Cybercrime Awareness

UPI fraud is a common form of cybercrime where criminals deceive users to steal money through fake transactions or phishing. It usually happens by exploiting users' lack of awareness or carelessness in sharing sensitive information. This task raised my aware-

ness about prevention techniques like verifying payment requests, using secure apps, and avoiding sharing OTPs. Learning about such cyber threats emphasized the importance of online safety practices. It also motivated me to educate others about protecting personal data and being cautious while using digital payment methods.

7 Conclusion

This project has significantly enhanced my digital literacy skills by providing practical experience with various platforms and digital tools. I gained valuable knowledge about safe internet use, professional communication, and cybercrime prevention. Developing a digital portfolio and solving coding problems strengthened my technical abilities. Overall, these digital literacy skills are essential for academic success and preparing for future career opportunities in the technology-driven world.
